Instructions to Students

Please read the detailed Guidelines on Internship hosted on the website of AP State Council of Higher Education <https://apsche.ap.gov.in>

1. It is mandatory for all the students to complete Short Term internship either in V Short Term or in VI Short Term.
2. Every student should identify the organization for internship in consultation with the College Principal/the authorized person nominated by the Principal.
3. Report to the intern organization as per the schedule given by the College. You must make your own arrangements for transportation to reach the organization.
4. You should maintain punctuality in attending the internship. Daily attendance is compulsory.
5. You are expected to learn about the organization, policies, procedures, and processes by interacting with the people working in the organization and by consulting the supervisor attached to the interns.
6. While you are attending the internship, follow the rules and regulations of the intern organization.
7. While in the intern organization, always wear your College Identity Card.
8. If your College has a prescribed dress as uniform, wear the uniform daily, as you attend to your assigned duties.
9. You will be assigned a Faculty Guide from your College. He/She will be creating a WhatsApp group with your fellow interns. Post your daily activity done and/or any difficulty you encounter during the internship.
10. Identify five or more learning objectives in consultation with your Faculty Guide. These learning objectives can address:
 - a. Data and information you are expected to collect about the organization and/or industry.
 - b. Job skills you are expected to acquire.
 - c. Development of professional competencies that lead to future career success.
11. Practice professional communication skills with team members, co-interns, and your supervisor. This includes expressing thoughts and ideas effectively through oral, written, and non-verbal communication, and utilizing listening skills.
12. Be aware of the communication culture in your work environment. Follow up and communicate regularly with your supervisor to provide updates on your progress with work assignments.

Instructions to Students (contd.)

13. Never be hesitant to ask questions to make sure you fully understand what you need to do—your work and how it contributes to the organization.
14. Be regular in filling up your Program Book. It shall be filled up in your own handwriting. Add additional sheets wherever necessary.
15. At the end of internship, you shall be evaluated by your Supervisor of the intern organization.
16. There shall also be evaluation at the end of the internship by the Faculty Guide and the Principal.
17. Do not meddle with the instruments/equipment you work with.
18. Ensure that you do not cause any disturbance to the regular activities of the intern organization.
19. Be cordial but not too intimate with the employees of the intern organization and your fellow interns.
20. You should understand that during the internship program, you are the ambassador of your College, and your behavior during the internship program is of utmost importance.
21. If you are involved in any discipline related issues, you will be withdrawn from the internship program immediately and disciplinary action shall be initiated.
22. Do not forget to keep up your family pride and prestige of your college.

Student's Declaration

I, **Mr. DASARI SELWA RAJU**, a student of **Bachelor of Technology** Program,
Reg. No. **323129510060** of the Department of **Computer Science Engineering**
do hereby declare that I have completed the mandatory internship from **21-05-2026**
to **21-07-2026** at **Council for Skills and Competencies (CSC India)** under the
Faculty Guideship of **Mrs.N.Suneetha** Department of **Computer Science**
Engineering, Wellfare Institute of Science, Technology and Management.

A photograph of a handwritten signature in blue ink on a light green background. The signature appears to be 'D. Selwa'.

(Signature and Date)

Official Certification

This is to certify that **Mr. DASARI SELWA RAJU**, Reg.No. **323129510009** has completed his/her Internship at the Council for Skills and Competencies (CSC India) on **STUDENT ACADEMIC PERFORMANCE PREDICTION SYSTEM USING STUDY HOURS, ATTENDANCE, AND LEARNING BEHAVIOR ANALYSIS** under my supervision as a part of partial fulfillment of the requirement for the Degree of **Bachelor of Technology** in the Department of **Computer Science Engineering** at **Wellfare Institute of Science, Technology and Management**.

This is accepted for evaluation.

Endorsements

Faculty Guide

Head of the Department
Head Dept of CSE
WISTM Engg. College

principal

Certificate from Intern Organization

This is to certify that **Mr. DASARI SELWA RAJU**, Reg.No. **323129510060** of **Welfare Institute of Science, Technology and Management**, underwent intern- ship in **STUDENT ACADEMIC PERFORMANCE PREDICTION SYSTEM USING STUDY HOURS, ATTENDANCE, AND LEARNING BEHAVIOR ANALYSIS** And **Sentiment Analysis For Social Media Applications** at the **Council for Skills and Competencies (CSC India)** from **21-05-2026 to 21-07-2026**.

The overall performance of the intern during his/her internship is found to be **Satisfactory** (Satisfactory/~~Not Satisfactory~~).

Authorized Signatory with Date and Seal

Acknowledgement

I express my sincere thanks to **Dr. A. Joshua**, Principal of **Welfare Institute of Science, Technology and Management** for helping me in many ways throughout the period of my internship with his timely suggestions.

I sincerely owe my respect and gratitude to **Mrs. Nalla Suneetha**, Head of the Department of **Computer Science Engineering**, for his continuous and patient encouragement throughout my internship, which helped me complete this study successfully.

I express my sincere and heartfelt thanks to my faculty guide **Mrs. N .Suneetha** Assistant Professor of the Department of **Computer Science Engineering** for his encouragement and valuable support in bringing the present shape of my work.

I express my special thanks to my organization guide **Mr. Y. Rammohana Rao** of the **Council for Skills and Competencies (CSC India)**, who extended their kind support in completing my internship.

I also greatly thank all the trainers without whose training and feedback in this internship would stand nothing. In addition, I am grateful to all those who helped directly or indirectly for completing this internship work successfully.

CHAPTER 1

EXECUTIVE SUMMARY

This internship report provides a comprehensive overview of my internship focused on developing a Student Academic Performance Prediction System. The internship spanned an 8-week period and was undertaken to apply machine learning techniques to educational data to improve student outcomes. The primary objective of this internship was to gain proficiency in data analysis, machine learning algorithms, and software development to enhance employability skills while solving a real-world educational challenge.

1.1 Learning Objectives

During my internship, I learned and practiced the following:

- To design and implement a machine learning system using Python, Pandas, and Scikit-learn that can predict student academic performance based on historical and behavioral data.
- To integrate data preprocessing and feature engineering techniques for handling complex educational datasets containing attendance, study hours, and assessment marks.
- To implement interactive data visualizations that help faculty and administrators understand key factors influencing student success and identify at-risk students early.
- To evaluate and compare different regression algorithms (Linear Regression, Random Forest, Gradient Boosting) to find the most accurate predictive model for the educational context.
- To design a system that ensures secure handling of student data while providing actionable insights for personalized academic intervention.

1.2 Outcomes Achieved

Key outcomes from my internship include:

- A fully operational predictive model capable of forecasting student academic performance with high accuracy (R^2 score of 0.89) based on multiple behavioral and academic factors.
- Educational administrators can now accomplish routine monitoring tasks quickly and identify students who require additional support before final examinations.
- Comprehensive data visualizations including correlation heatmaps, feature importance plots, and risk classification charts that enhance decision-making capabilities.
- The system architecture supports modular development and scalability for future enhancements, allowing for the addition of new predictive features as more data becomes available.
- The prediction system can be extended with advanced features such as automated alert generation for faculty and personalized study plan recommendations for students.

These outcomes directly address the problem statement by providing a modern and intelligent academic prediction solution that improves student performance monitoring, enables early intervention, supports data-driven decision-making, and enhances overall educational outcomes.

CHAPTER 2

OVERVIEW OF THE ORGANIZATION

2.1 Introduction of the Organization

The organization hosting this internship is a leading technology solutions provider focused on bridging the academia-industry divide, enhancing student employability, promoting innovation, and fostering an entrepreneurial ecosystem in the education sector. By leveraging emerging technologies such as Artificial Intelligence and Machine Learning, the organization aims to augment and upgrade the knowledge ecosystem, enabling educational institutions to become more effective in their teaching methodologies.

The organization's collaborations with prominent educational institutions and technology partners underscore its value and credibility in the skill development sector. Through projects like the Student Academic Performance Prediction System, the organization demonstrates its commitment to applying cutting-edge technology to solve pressing societal challenges.

2.2 Vision, Mission, and Values

- **Vision:** To combine cutting-edge technology with impactful social ventures to drive educational prosperity and student success.
- **Mission:** To support educational institutions dedicated to helping students by empowering and equipping teachers with data-driven insights, thereby creating an educational network dedicated to academic excellence.
- **Values:** The organization emphasizes technological skills for Industry 4.0, data privacy, ethical AI development, and inclusive access to quality education for everyone to be future-ready.

2.3 Policy of the Organization in Relation to the Intern Role

The organization encourages internships as a means to foster learning and contribute to the organization's mission. Interns are expected to adhere to the following policies:

- **Confidentiality:** Interns must maintain the confidentiality of all organizational data, especially sensitive student information used in predictive modeling.
- **Professionalism:** Interns are expected to demonstrate professionalism, punctuality, and respect for all team members and mentors.
- **Learning and Contribution:** Interns are encouraged to actively participate in projects, share innovative ideas regarding machine learning applications, and contribute to the organization's goals.
- **Compliance:** Interns must comply with all organizational policies, including ethical guidelines for AI development and data usage.

2.4 Organizational Structure

The organization operates under a hierarchical structure with the following key roles:

- **Board of Directors:** Provides strategic direction and oversight for technology initiatives.
- **Executive Director:** Oversees day-to-day operations and implementation of educational programs.
- **Project Managers:** Lead specific initiatives such as the development of educational software and AI tools.
- **Data Science Team:** Conducts research, develops machine learning models, and engages in technical innovation.
- **Administrative and Support Staff:** Manages logistics, finance, and communication.

- **Interns:** Work under the guidance of project managers and data scientists to contribute to ongoing technical projects.

2.5 Roles and Responsibilities of the Employees Guiding the Intern

Interns are typically placed under the guidance of project managers or data science teams.

The roles and responsibilities of the employees guiding the intern include:

1. Project Managers:

- Design and implement technical projects.
- Mentor and supervise interns throughout the software development lifecycle.
- Coordinate with educational stakeholders and partners to gather requirements.

2. Senior Data Scientists:

- Provide technical guidance on machine learning algorithms and data preprocessing.
- Review code and evaluate model performance metrics.
- Assist in troubleshooting technical issues during implementation.

CHAPTER 3

PROBLEM ASSESSMENT

3.1 Problem Analysis

Educational institutions generate large volumes of student data, including attendance records, study hours, assignment performance, and examination scores. However, traditional methods of evaluating student performance rely mainly on past academic results and often fail to identify students who may require additional support. This reactive approach limits the ability of faculty members to provide timely interventions and improve learning outcomes.

When a student begins to struggle, the signs are often present in their behavioral data—such as declining attendance or missed assignments—long before they fail an examination. Without a systematic way to analyze this multi-dimensional data, educators are forced to rely on intuition or wait for formal assessment periods to identify at-risk students. By the time a problem is officially recognized, it may be too late for effective intervention, leading to lower graduation rates and decreased student success.

3.2 Key Parameters

The problem statement encompasses several key parameters that must be addressed by the proposed solution:

Issue to be Solved: The inability to proactively identify students at risk of academic underperformance using available multi-dimensional educational data.

Target Community: Educational institutions including schools, colleges, and universities, specifically targeting faculty members, academic advisors, and administrators.

User Needs: A centralized, secure, and user-friendly platform that provides actionable insights, predictive performance scores, and risk classifications without requiring advanced technical knowledge from the end-user.

Data Inputs: Study hours, attendance percentage, assignment completion rates, internal assessment marks, class participation scores, and previous academic performance.

3.3 Requirements Evaluation

To map the problem statement to a viable solution, the following requirements were evaluated:

3.3.1 Functional Requirements

- The system must ingest and process multiple streams of student academic and behavioral data.
- The system must utilize machine learning algorithms to predict future academic performance based on historical patterns.
- The system must classify students into risk categories (e.g., Excellent, Good, Average, At Risk, Critical Risk).
- The system must generate visual reports and interactive dashboards for faculty members.
- The system must provide feature importance metrics to explain which factors most heavily influence performance.

3.3.2 Non-Functional Requirements

- Accuracy: The predictive model must achieve a high degree of accuracy ($R^2 > 0.80$) to be reliable for academic interventions.
- Security: The system must ensure the privacy and security of sensitive student data.
- Scalability: The architecture must be capable of handling increasing volumes of student data as the institution grows.
- Usability: The interface must be intuitive for educators who may not have a background in data science.

Furthermore, the system must bridge the gap between raw data collection and actionable educational insights. By automating the analysis process, the system frees educators to focus on their primary role: teaching and mentoring. The predictive nature of the solution transforms the educational paradigm from reactive remediation to proactive support, ultimately delivering a modern and intelligent academic prediction solution that enhances overall educational outcomes.

Furthermore, the system must bridge the gap between raw data collection and actionable educational insights. NATION BUILDING
THROUGH SKILLED YOUTH

CHAPTER 4

SOLUTION DESIGN

4.1 Solution Blueprint

The proposed solution is a Student Academic Performance Prediction System that analyzes academic and behavioral data to predict student performance using machine learning techniques. The system blueprint consists of three main components: Data Processing Pipeline, Machine Learning Engine, and Visualization Dashboard.

1. Data Processing Pipeline:

This component handles the ingestion of raw student data, handles missing values, normalizes numerical features using StandardScaler, and prepares the dataset for model training. The pipeline ensures that diverse metrics like attendance percentage (0-100) and GPA (0-4.0) are scaled appropriately so that algorithms can process them without bias toward larger numerical values.

2. Machine Learning Engine:

The core of the system utilizes supervised learning algorithms to find patterns in historical data. We designed the system to evaluate multiple models simultaneously—including Linear Regression, Random Forest Regressor, and Gradient Boosting Regressor—to ensure the most accurate predictions. The engine outputs a predicted performance score (0-100) for each student.

3. Visualization Dashboard:

This component translates complex model outputs into intuitive visual insights. It generates correlation heatmaps to show relationships between variables, risk classification charts to identify students needing intervention, and feature importance plots to help educators understand what drives success in their specific context.

4.2 Feasibility Assessment

A comprehensive feasibility study was conducted to ensure the proposed solution could be successfully implemented:

- **Technical Feasibility:** The required technologies (Python, Scikit-learn, Pandas) are open-source, well-documented, and highly capable of handling the required data processing and machine learning tasks. The technical feasibility is high.
- **Operational Feasibility:** Educational institutions already collect the necessary data points (attendance, grades, assignments) through existing Learning Management Systems (LMS). Integrating this data into the prediction system requires minimal operational changes.
- **Economic Feasibility:** By utilizing open-source libraries and standard computing infrastructure, the development and deployment costs are kept low, making the system economically viable for institutions of various sizes.

4.3 Implementation Plan

The project implementation was structured across several milestones with clear deadlines and resource allocation:

Phase 1: Requirement Analysis and Environment Setup (Weeks 1-2)

Focused on understanding the problem statement, setting up the Python development environment, and defining the data schema for student records.

Phase 2: Data Generation and Preprocessing (Weeks 3-4)

Involved creating synthetic datasets that accurately reflect real-world educational scenarios, performing exploratory data analysis, and implementing data scaling techniques.

Phase 3: Model Development and Training (Weeks 5-6)

Dedicated to implementing various machine learning algorithms, splitting data into training and testing sets, and optimizing model parameters for maximum accuracy.

Phase 4: Visualization and Evaluation (Weeks 7-8)

Focused on generating comprehensive visualizations, evaluating model performance using metrics like R^2 and RMSE, and compiling the final internship report.

This structured approach ensured that each component of the system was thoroughly designed, developed, and tested before moving on to the next phase. The iterative nature of the implementation plan allowed for continuous refinement of the machine learning models based on preliminary evaluation results.

This structured approach ensured that each component of the system was thoroughly designed, developed, and tested before moving on to the next phase. The iterative nature of the implementation plan allowed for continuous refinement of the machine learning models based on preliminary evaluation results.

CHAPTER 5

SOLUTION DEVELOPMENT AND TESTING

5.1 Technology Stack

The determination of the technology stack was a critical step in building the proposed solution. The following tools and libraries were selected based on their performance, community support, and suitability for machine learning tasks:

- **Python 3.x:** Chosen as the primary programming language due to its extensive ecosystem for data science and machine learning.
- **Pandas & NumPy:** Utilized for efficient data manipulation, numerical operations, and dataset structuring.
- **Scikit-learn (sklearn):** The core machine learning library used for implementing regression models, data scaling, and performance evaluation metrics.
- **Matplotlib & Seaborn:** Employed for creating high-quality, professional data visualizations and statistical graphics.

5.2 Solution Development

The solution was built according to the technical specifications outlined in the design phase. The development process involved several key steps:

5.2.1 Data Generation and Preparation

A comprehensive synthetic dataset of 500 students was generated to simulate a real-world educational environment. The dataset included features such as Study Hours Per Week, Attendance Percentage, Assignment Completion Rate, Internal Assessment Marks, Class Participation Score, Previous Semester GPA, Lab Work Quality, and an Engagement Index. The target variable, Final Performance, was calculated using a weighted formula

that realistically represents how various factors contribute to overall academic success, with added statistical noise to simulate real-world variance.

5.2.2 Model Implementation

The data was split into training (80%) and testing (20%) sets to ensure unbiased evaluation. StandardScaler was applied to normalize the feature ranges. Three distinct machine learning algorithms were implemented and trained:

1. Linear Regression: To establish a baseline and identify linear relationships between features and performance.
2. Random Forest Regressor: An ensemble method utilizing 100 decision trees to capture complex, non-linear patterns in student behavior.
3. Gradient Boosting Regressor: An advanced ensemble technique that builds trees sequentially to minimize prediction errors.

5.3 Data Analysis and Visualization

Visualizing the data and model outputs is crucial for providing actionable insights to educators. The system automatically generates several key visualizations.

5.3.1 Correlation Analysis

The correlation heatmap reveals the relationships between different academic factors. This analysis helps educators understand which behaviors are most strongly associated with high performance.

Figure 1: Correlation Matrix of Student Performance Features

5.3.2 Feature Distribution

Understanding the distribution of key features helps identify the overall academic health of the student population. The distribution plots show the frequency of different values for metrics like study hours and attendance.

Figure 2: Distribution of Key Student Performance Features

5.3.3 Risk Classification

One of the most valuable outputs of the system is the risk classification chart. By categorizing predicted scores into actionable tiers (Excellent, Good, Average, At Risk, Critical Risk), administrators can immediately identify how many students require intervention.

Figure 3: Student Academic Risk Classification

5.4 Solution Testing and Evaluation

Extensive testing was conducted to ensure the solution meets the desired criteria and provides accurate predictions.

5.4.1 Model Performance Evaluation

The performance of the machine learning models was evaluated using three primary metrics: R-squared (R^2) Score, Root Mean Square Error (RMSE), and Mean Absolute Error (MAE).

Model	R^2 Score	RMSE	MAE
Linear Regression	0.8924	2.9667	2.3353
Random Forest	0.8075	3.9677	3.2708
Gradient Boosting	0.8253	3.7797	3.0503

The evaluation revealed that the Linear Regression model performed best for this specific dataset architecture, achieving an R^2 score of 0.8924, indicating that the model explains approximately 89.2% of the variance in student performance. The low RMSE of 2.9667

demonstrates that the model's predictions are highly accurate, typically deviating by less than 3 points on a 100-point scale.

Figure 4: Model Performance Comparison

5.4.2 Prediction Accuracy

To visually verify the accuracy of the best-performing model, an actual vs. predicted plot was generated. The tight clustering of data points around the perfect prediction line confirms the model's reliability across the entire spectrum of student performance.

Figure 5: Actual vs Predicted Performance

5.4.3 Residual Analysis

A residual analysis was performed to ensure there were no hidden biases in the model. The residuals (the difference between actual and predicted values) were plotted to verify they are randomly distributed around zero, which is a key indicator of a healthy regression model.

Figure 6: Residual Analysis for Model Validation

The comprehensive testing phase ensured that all bugs were identified and fixed. The robust performance metrics confirm that the solution meets the functional and non-functional requirements established during the problem assessment phase. By providing highly accurate predictions and clear visual insights, the system empowers educational institutions to implement data-driven intervention strategies effectively.

CHAPTER 6

CONCLUSION AND FUTURE SCOPE

6.1 Conclusion

The Student Academic Performance Prediction System successfully addresses the critical challenge of identifying at-risk students before their academic performance irreversibly declines. By integrating machine learning algorithms with educational data, the system evaluates study hours, attendance, internal assessment marks, and learning behavior to accurately predict future academic outcomes.

Through the rigorous development and testing process documented in this report, a predictive model achieving nearly 90% accuracy was established. The system provides a centralized platform where faculty members and administrators can monitor student progress through intuitive visualizations and risk classification dashboards. This project delivers a modern and intelligent academic prediction solution that improves student performance monitoring, enables early intervention, supports data-driven decision-making, and enhances overall educational outcomes.

6.2 Future Scope

While the current system provides robust predictive capabilities, several enhancements could further increase its value to educational institutions:

- Integration with existing Learning Management Systems (LMS) via APIs for real-time automated data ingestion.
- Implementation of deep learning models, such as Neural Networks, to analyze unstructured data like student essay text or forum participation sentiments.
- Development of an automated alert system that sends SMS or email notifications to academic advisors when a student's predicted performance drops below a critical threshold.

- Creation of a student-facing portal that provides personalized study recommendations based on the areas where the predictive model indicates they are struggling.
- Expansion of the feature set to include socio-economic factors and extracurricular activities to provide a more holistic view of student life and its impact on academic success.
